SEMINAIRE D'ANALYSE

➤ **VENDREDI 09 octobre 2009 à 16h15 à la salle MA A330**

Monsieur **Antonin CHAMBOLLE** (*Ecole Polytechnique, Paris, France*) donnera une conférence sur le thème:

**"A VARIATIONAL MODEL FOR THE EQUILIBRIUM OF
EPITAXIALLY STRAINED FILMS"**

I will discuss a simple variational model for the equilibrium of hetero-epitaxially grown crystals on a substrate. In 2D, a simple variational model which mixes a volume and an interface energy can be studied and numerically implemented, as we had proposed in a paper with Eric Bonnetier (U. Grenoble). In higher dimension, the mathematical framework is more complex but we can provide (at least in the scalar setting, or nonlinear setting) a representation which also can be minimized. This is a joint work with Margherita Solci (U. Sassari).
